BRACKET E-5 GY

BALL–JOINT HOLDER FOR OPAL/AOD–210 OUTDOOR DETECTORS.

BRACKET E–5 GY is part of the **BRACKET E** ceiling–and–wall mount distance holder.

The element is intended for mounting the **OPAL (GY)**, **OPAL Plus (GY)**, **OPAL Pro (GY)** and **AOD–210 (GY)** detectors.

The holder allows adjustment of the detector tilt angle in two planes: vertically up to 60° and horizontally up to 90°. This helps you find optimal position of the detector in relation to the protected area.

BRACKET E–5 GY is mounted on the **BRACKET E–1 (GY)** body. The **BRACKET E–2B (GY)** insert and the **BRACKET E–6** tamper sensor are mounted to the holder.
